

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

~ Creating my factory functions, all I had to do was to look for repeated code that does a specific task.

2. What parts of encapsulating your logic were hard?

~ Deciding what my return statement should look like when there’s only one item I can possibly return.

3. Is abstracting the book preview a good or bad idea? Why?

~ It is a good idea because it helps to not repeat long lines of code and also provides easy access to the piece of code to use multiple times.
